INTERESTS

TECHNOLOGY

I'M STUDYING REACTJS, VARNISH 4, WEB APPLICATION SECURITY

From the beginning of my professional career I try to keep up with the new technologies of reaction to web applications, at the same time that I try to solve security problems in both the code level and the servers I manage. Technologies that I believe will be developed and "matured" over short periods of time, also deserve my attention. Lately, ReactJS and PHP7 have gotten my attention.

METHODOLOGIES

SCRUM AND AGILE

Recently, at least in Portugal, the application of SCRUM has emerged as a slogan in large companies. So I have focused my reading on SCRUM manuals, from technical to historical that address the SCRUM methodology and its application in real life.
